

LETTEREX

TRADE MARK REG.

MANIFOLD CARBON PAPER SETS

Successor to loose copies and carbon paper

INSTRUCTIONS:

1. Simply gather in your usual way as many sheets of LETTEREX as there are to be copies of the letter, memo, or form you are about to type—

2. JOG the letter-head and LETTEREX together at top—

3. TYPE (If an erasure is necessary you will find that the carbons may be detached from the second sheets almost as easily as if they were not attached by the LETTEREX method)—

4. DETACH carbons from written sheets by simply pulling top and bottom, withdrawing carbons from the bottom of the set—

5. THROW CARBONS AWAY! LETTEREX is made with one-time carbon. Your time is worth more to your employer typing than salvaging carbon paper.

6. LETTEREX is the modern, efficient way to get your office work done on time, and leave both hands and spirits unspoiled.
